

Good afternoon: warm up in notebooks, sketch the figure then answer #1-3

1. Name 2 pairs of adjacent angles

$\angle NAT$; $\angle RAT$; $\angle CAE$ $\angle EAN$

2. Name a pair of vertical angles

$\angle CAN$; $\angle TAR$

3. Explain why $\angle CAR$ is not complementary.

2⁺ angles
Summing 90°

Assessment

CENSORED

Footer

HONOR PLEDGE: I neither gave nor received assistance during this assessment. INITIALS:

bottom of assessment

Clear your desks except for a pencil and a cover sheet

- put your name on it
- use your cover sheet
- not enough room? use back of test (please label clearly)

- when finished, do self-assessment and initial honor pledge

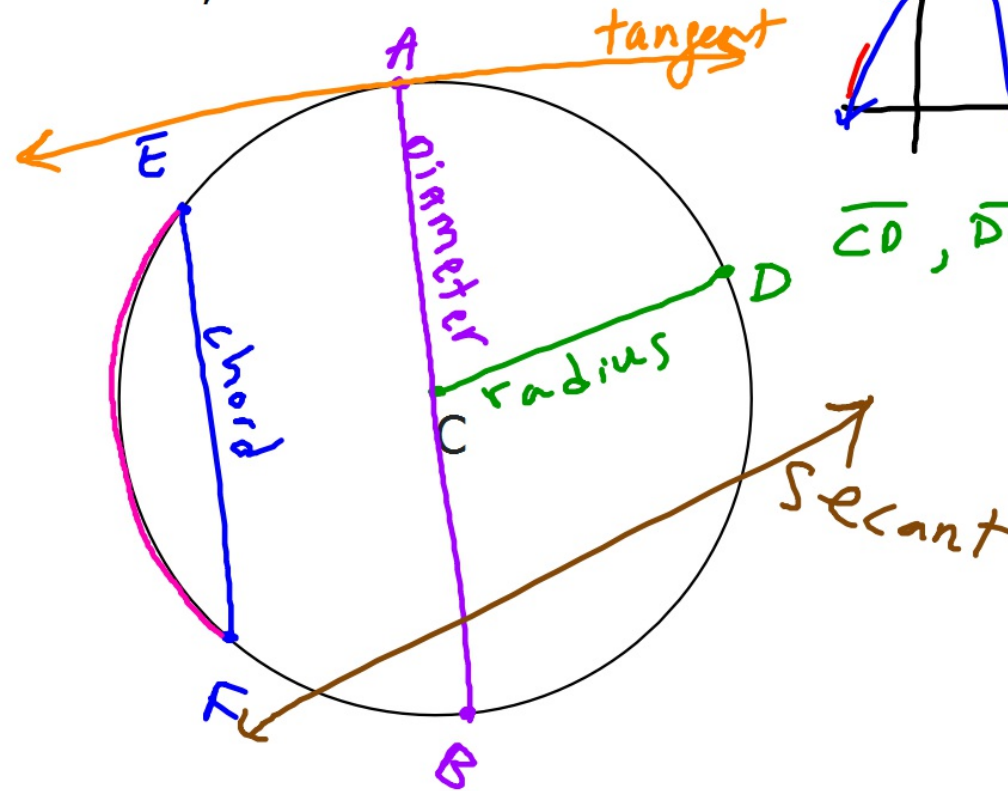

- hand test and cover sheet to me at the computer, then pick up an ACT practice page to work on as others finish OR work on something quietly (if you have headphones, you can start tonight's hw video!)

Good luck!
Do your best!

Circle terminology

Use the red disk to trace out a circle, then estimate its center

- Diameter
- Radius
- Chord \overline{EF}
- Arc \overbrace{EF}
- Tangent
- Secant

NOTES

\overline{CD} , \overline{DC}

Dissection

picture of dead frog on lab table
edited out :)

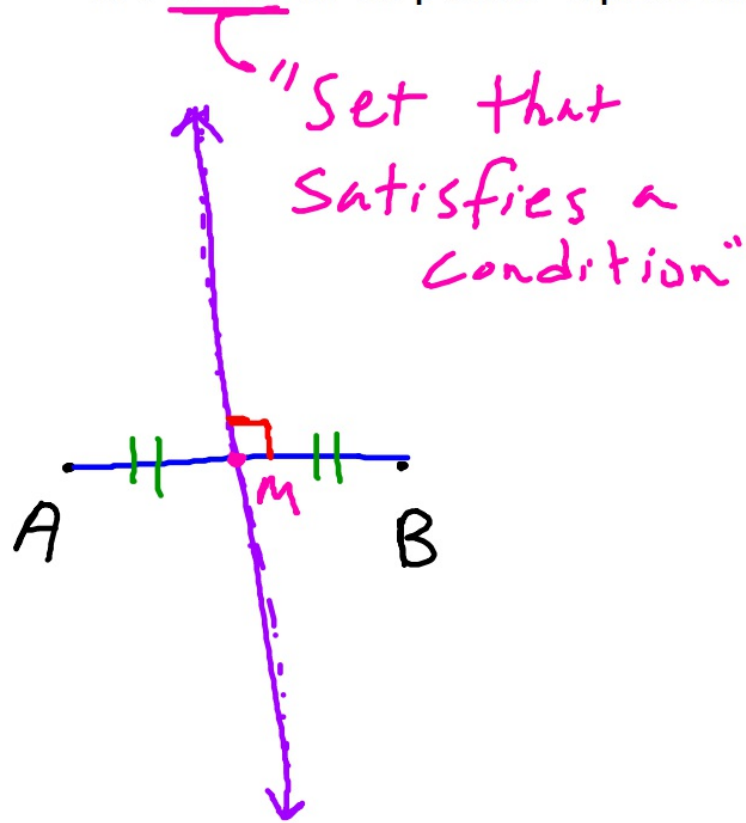

Bisection

Given 3 noncollinear points, how do you find the unique circle that passes through all 3?

cross @ 90° 2 equal parts
Perpendicular Bisector of a line segment

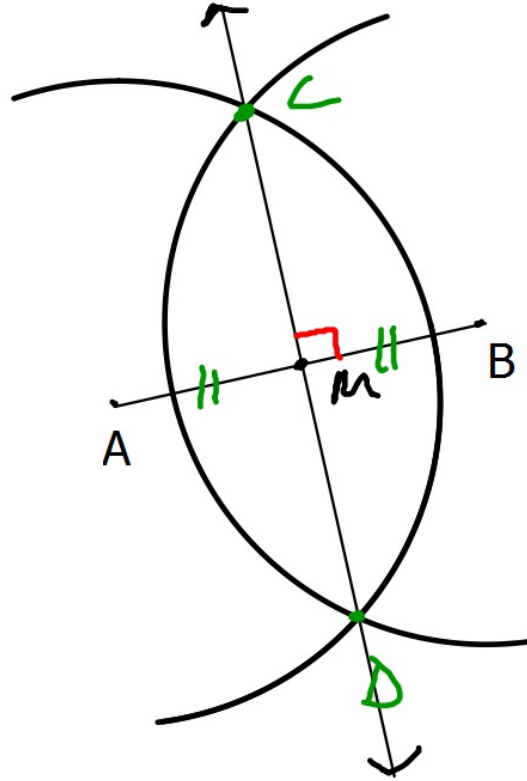

the locus of all points equidistant from the endpoints

Constructing a perpendicular bisector (will need to do this for a future assessment!)

mark 2 points on your page, A and B, construct \overline{AB} .

How does this relate to circles?

HW:

Take notes on the  video posted at mgeo.weebly.com

Video is made by me :)
