

# Good morning: please do warm up in notes

1) Are these figures similar? Explain.

27

27

10

10

Handwritten calculations in red:

$$\frac{27}{14} \neq \frac{15}{10} = \frac{3}{2}$$

*similar*

2.  $\triangle OMG \sim \triangle WTH$ . Find the value of  $x$  and  $y$

Reminders:

- reassess in DS today/tmrw q2 ends in a week

At sunset, a tall tree casts a shadow that measures 22 feet long.  
At the same time, a 5'6" person casts a 10 foot shadow.  
How tall is the tree?

Your draft for a mural is a rectangle that measures 12" by 8" = 96 in<sup>2</sup>  
The wall on which you will paint the real mural measures 120" by 80"

If the draft required 2 tubes of paint, how many tubes of paint will the real mural require?

9600 in<sup>2</sup>

If linear scale is  $n$ ,  
then area scale  
is  $n^2$

Linear  
Scale:

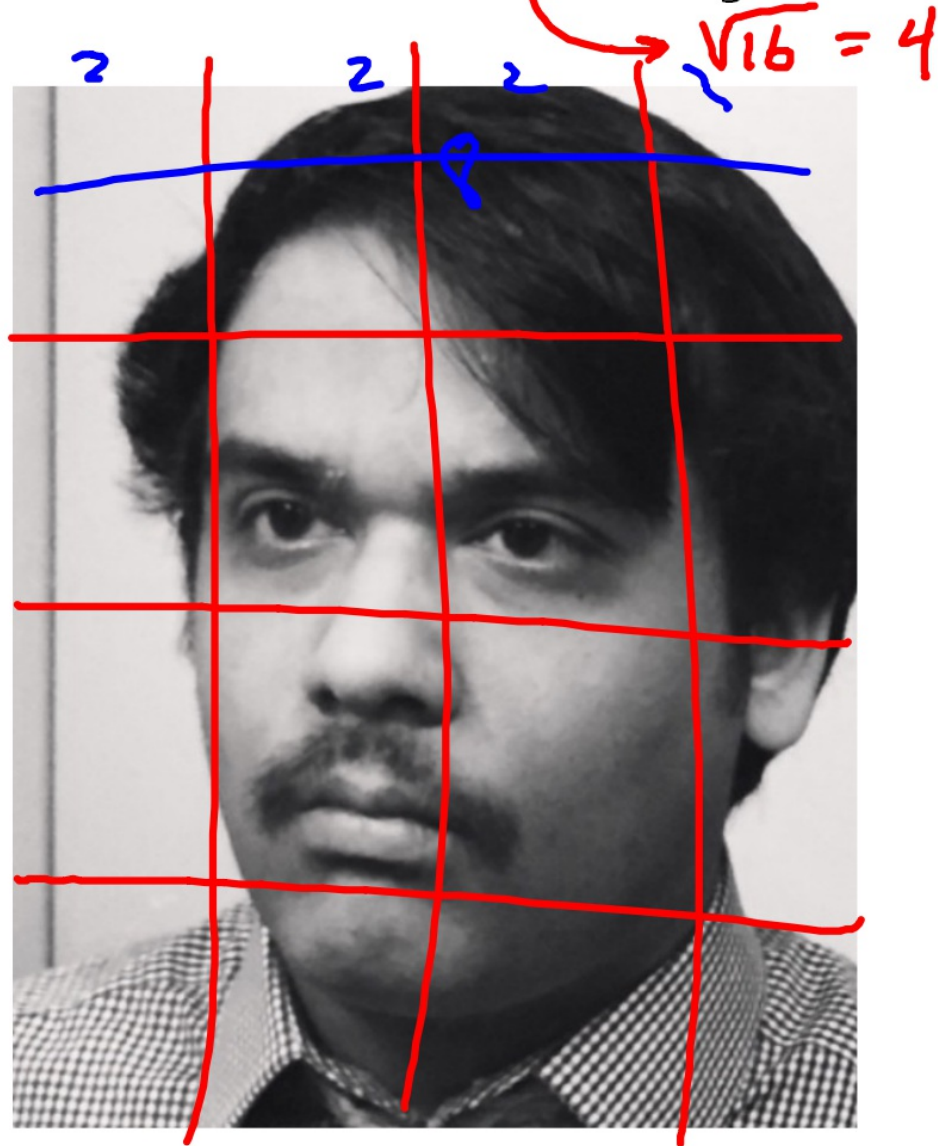

$$\frac{9600}{96} = 100$$

$$\frac{120}{12} = 10 \leftarrow n$$

$$\frac{80}{8} = 10 \leftarrow$$

If a wallet size photo measures 2" x 2.5", and it takes 16 wallet photos to cover the original portrait, what are the dimensions of the original portrait?

## Euclidean Dilation

Tools: compass, straight edge

## Cartesian Dilations

Centered at the origin:  $(x,y) \rightarrow (kx, ky)$

What if these  
were different numbers?

When not centered at the origin, things are not so easy!  
See video assigned last Monday for more details

.

Share with your elbow partner  
something you have learned so far today

## Similar Triangles

At sunset, a tall tree casts a shadow that measures 22 feet long.  
At the same time, a 5'6" person casts a 10 foot shadow.  
How tall is the tree? 5.5'

$$\textcircled{1} \frac{5.5}{X} = \frac{10}{22}$$

$$\textcircled{2} \frac{5.5}{10} = \frac{X}{22}$$

## What is needed for similar triangles? (Similarity Criteria)

If all 3 side pairs are in proportion to corresponding sides in the other, then the two triangles are congruent. (SSS~)

$$\frac{6}{3} = 2, \quad \frac{8}{4} = 2, \quad \frac{10}{5} = 2$$

SSS~

If two angles are congruent, then the triangles are similar (AA~)

AA~

If two side pairs are in proportion and their included angle is congruent, then the triangles are similar (SAS~)

$$\frac{12}{4} = 3, \quad \frac{9}{3} = 3$$

SAS~

Are they similar? Give your reasoning and complete the similarity statement.

$\triangle ABC \sim$  \_\_\_\_\_

$\triangle KLM \sim$  \_\_\_\_\_

## Fun! Isometric Dot Paper

Homework  
p. 255 #1, 4, 10  
p. 260 #7-13
